

The American Lung Association is committed to ongoing evaluation of the Breathe Well, Live Well® program and requests that facilitators complete surveys to provide feedback and insight into the implementation of the program. It is also important for facilitators to administer the participant evaluation surveys to the adult participants after the last session in order to understand the efficacy of program.

## What information is being collected?

The BWLW adult surveys are a post-evaluation design to measure the following items:

- Demographic information
- Confidence in using their medications and asthma self-management skills
- Satisfaction with the program

Adult participant responses will be analyzed in aggregate, keeping the survey responses anonymous. The BWLW post survey asks some additional questions to gather feedback on the adult participant's experiences with the overall program content and implementation.

We recognize that you may have reporting requirements that go beyond the scope of the national evaluation protocol. If you have additional requirements, please reach out to

*For inquiries about data sharing, please reach out to the American Lung Association via [Jasmine.Sturdivant@lung.org](mailto:Jasmine.Sturdivant@lung.org). Each request will be taken into consideration on a case-by-case basis and data may not be provided in every case. Please note that data may be limited to state specific canned reports and may only include data such as: demographic breakdown of respondents and/or responses by survey question. Further analysis of local outcomes may not be feasible unless funding is available.*
