

November 4, 2024

Administrator Michael Regan
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20004

Dear Administrator Regan:

I urge the U.S. Environmental Protection Agency (EPA) to update the current, inadequate National Ambient Air Quality Standards for Ozone.

EPA has recently taken several critical steps to reduce air pollution and address climate change, including stronger National Ambient Air Quality Standards for particulate matter, tighter emissions standards for cars and trucks, and measures to reduce emissions from the oil and gas industry and from the power sector.

Stronger ozone standards, however, are missing from this list of life-saving measures. The science is clear: stronger ozone standards are urgently needed to prevent asthma attacks and save lives.

The Clean Air Act requires that you complete the review of the ozone standards by December 31, 2025. EPA must meet this deadline. Please prioritize the health of my family and of families nationwide and strengthen the ozone standards to 55-60 parts per billion.

Sincerely,

Phaidra Browning, MSN, Alabama
